1. SOME MAIN INDICATORS FOR ANALYZING THE BASIC SITUATION OF HOUSEHOLDS THROUGH THE CENSUS DATA

Dr. Phung Chi Hien

For analyzing and assessing the basic situation of the household through census data it is necessary to use main indicators such as: household characteristics, number of household members, change in production structure, quality of labour, use of land, equipment, results of agricultural, forest and fishery production, improvement of material and spirit life.

2. SOME POINTS WORTH TO BE ATTENDED ON DATA COLLECTION FOR CALCULATING THE TRANSPORT PRICE INDEX IN THAI BINH PROVINCE

Tran Trong Kham

To implement the plan of data collection for calculating the transport price index – one of the indexes which are being concerned by various levels and branches and from the actual situation in Thai Binh province we find the following salient points:

- For passenger traffic, there was no water-transport in Thai Binh province

- For freight traffic – there was no specialized transport in Thai Binh province. In particular among the transports by taxi, lambretta and Cong-nong vehicle we only have data for the Cong-nong transport. The situation of the along-river and -sea shore freight transports is also similar. In order to overcome the above-mentioned shortcomings it is necessary to:

- Allow provinces to choose the type of transport that are actually operating in their local areas to collect information

- For transportation price we should use a stable price for the whole survey period.

3. THE RURAL, AGRICULTURAL AND FISHERY CENSUS IN NINH BINH PROVINCE

Le Van Dung

In order to successfully implement the rural, agricultural and fishery census, the Ninh Binh Provincial Statistics Office had implemented well the following aspects of work:

establish the Census Steering Committee, organize the publicity, prepare the listing, recruit the fieldworkers, conduct the training of fieldworkers, carry out the fieldwork, organize the monitoring and supervision, conduct the post-enumeration survey, check up and transfer the questionnaires.

4. DRAWING STATISTIC CHARTS ON ADMINISTRATION MAP - ADVANCED TECHNIQUES

Tran Triet Tam

The article introduces advanced techniques on drawing statistic charts on administration map, including two parts:

- Change the presentation form, including change of size, colour, frame; add notes on place name and add title and note bar

- Transpose, adjust the map size and print the result.

5. ON THE SELECTION OF LARGE UNITS INTO SAMPLE AND ITS REPRESENTATIVENESS

Pham Thanh Dao

The real statistic work requires the collection of information on large units. Thus, in sample surveys we often select these units into the sample. The article introduces some methods to improve the sampling representativeness.

6. APEC – SOME THINGS NEED TO BE KNOWN THROUGH STATISTIC DATA

Dr. Nguyen Quan

The Asia and Pacific Economic Cooperation (APEC) was established in November 1989 with 11 members and now it has 21 members. APEC occupies 46.69% of the land areas and 41.17% of the population, its GDP takes 56.3% and export takes 44.8% of the whole global figures. This region includes most of the world's developed economies such as: America, Japan, Australia, China, Russia, South Korea, and it is also the region absorbing much of the foreign investment – about 50%.

Especially in the 21st century, with the globalization tendency the APEC will become one of the world's largest economic centers. With the aim of introducing the audient with information on APEC, the author has selected and systematized many documents on its member countries and territories.
